## TIP MODULE

The “Tip Module” attachment offers an additional axis of movement that allows for elevation changes required for load pick-up or drop off. Tipping is accomplished via linear actuator controlled by the operator with easy to use controls with “Inhibit” button to eliminate inadvertent raising or lowering of the tip module.

The “Tip Module” can be mounted to various standard or custom end-effectors. Rolls, drums, cartons, totes and electronic devices and safely be handled. The “Tip Module” along with our extensive list of end-effectors provides for unique and innovative solutions to material handling to fulfill the request of the customer.

**Tip Attachment Mounted  
On Squeeze-O-Turn™**

**Contact RonI, LLC or your local dealer for application specific information. Custom applications are available.**
